**Re; Ascent walkway for use on Kalzip Aluminium standing seam roof**

Kalzip are pleased to announce the approval of the Ascent aluminium walkway by Safety Fabrications Ltd for use on Kalzip Aluminium standing seam roof profiles.

The Ascent walkway has been tested on the Kalzip roof sheet in accordance with BS EN 516:2006 and can be configured with a handrail system on one or both sides to achieve either a 0.36 kN or 0.74kN load (General or heavy duty applications) without the requirement for additional braces.

This has the advantage of allowing the walkway to be positioned immediately adjacent to the fall hazard / gutter-line. The walkway can be configured to run both parallel to and across the standing seams of the roof and it can be levelled to falls and stepped as required.

The walkway is CE marked and is manufactured in accordance BS 4592:0:2006 and BS EN 1090-1 :2009 + A1:2011.

For further information / pricing enquiries please contact Kalzip fabrications,

Regards,

Tony Mills.
